Stage One Meaningful Use Solution

The RWHC Quality Indicators Program is **certified** as an **EHR Module for Stage One Meaningful Use.** This certification, **RWHC MU v11.1**, along with our current Core Measures Program provides an opportunity to maximize staff time, efficiency, and data accuracy while meeting your multiple quality measure submission requirements.

Hospitals participating in the CMS EHR Incentive Program must submit performance data on 15 clinical quality measures (Stroke, VTE, and ED Throughput). Regardless of the EHR system or level of implementation, hospitals can use the RWHC QI Program to meet this essential Stage One certification requirement. We provide automated tools along with IT consultation that allow demographic and clinical data import to our database from many EHR systems.

The **RWHC MU v11.1** has received EHR modular* certification deeming our software capable of enabling hospitals to meet the Stage One Meaningful Use requirements to qualify for funding under the American Recovery and Reinvestment Act (ARRA).

Tested and certified under the Drummond Group's Electronic Health Records Office on the National Coordinator Authorized Testing and Certification Body (ONC-ATCB) program, the EHR software is 2011/2012 compliant in accordance with the criteria adopted by the Secretary of Health and Human Services.

RWHC has partnered the Stage One Meaningful Use Solution with our Core Measures Program to build a total quality reporting package tailored to your specific needs which not only maximizes your incentive dollars but will meet your data submission requirements.

For more information on the RWHC Quality Indicators Program, contact Beth Dibbert at bdibbert@rwhc.com, or 1-800-225-2531.
