

Montana Health Network (MHN) is a consortium of healthcare facilities located across the state of Montana and Wyoming. It is comprised of seventeen shareholding members and thirty three affiliate members in Montana, and two affiliate members in Wyoming. Montana Health Network was established in 1987 on a core product of workers compensation. Since its establishment MHN has grown to provide a full compliment of human resource benefits for member employees as well as other insurance products to help cover our member facilities.

MHN has a robust education division responsible for clinical training for nurses, CNA's and EMT's. Nursing CE's are available and courses are taught through a mobile network that brings instructors on-site into rural facilities. For many classes the education division utilizes a patient simulator that is carried in a mobile classroom. The simulator is used for hands on teaching, presenting real life scenarios for nursing schools, hospitals and healthcare career classes at high schools.

MHN's Mobile Classroom

Partnership products include mobile MRI services operated in North Dakota and Montana. As well as a collection agency operated in partnership with Northland Healthcare Alliance in North Dakota and MediSota in Minnesota.

MHN also provides a temporary staffing pool to member facilities that staff RN's, LPN's, CNA's, Physician's, PA's, NP's and Radiology Tech's. MHN continues to expand its temporary labor services. MHN's key focus is to recruit and retain healthcare staffing in eastern Montana, and coordinates with schools and facilities to establish a nurse internship program(UAP).

Additional services include group purchasing, business management, HR consulting, case management, long distance services, credentialing services, a compliance hotline, wound care consulting as well as grant writing coordinating. MHN, through grant activities, has administered the SHIP grant and was instrumental in establishing tele-pharmacy services in the region.
